

The background image shows a man in a light blue shirt from the side, holding a tablet. He is in a factory or industrial setting with various machines and equipment visible in the background. Overlaid on the image are several futuristic, glowing blue digital elements. These include a large circular arrow with '24/7' inside, a 'NEWS' section with a person icon, a 'Home' button, and a network diagram with three people icons connected by lines. There are also binary code (0s and 1s) and grid patterns floating around. The Siemens logo and tagline are in the top right corner.

## Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions only form one element of such a concept. Customer is responsible to prevent unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place. Additionally, Siemens' guidance on appropriate security measures should be taken into account. For more information about industrial security, please visit <http://www.siemens.com/industrialsecurity>.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends to apply product updates as soon as available and to always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase customer's exposure to cyber threats. To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under <http://www.siemens.com/industrialsecurity>.

# 1 Import TIA Portal settings

## 1.1 Introduction

The rules and recommendations for the settings in TIA Portal listed in the programming style guide are stored in the TIA Portal Settings File (tps file). You can find the tps file as a separate download in the article. To apply the settings, you can import the tps file into TIA Portal.

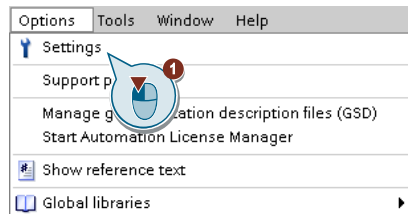

## 1.2 Import tps-File

You can import settings of the TIA Portal manually from a initialization file, for example, to take over settings from other users.

To import the settings manually, proceed as follows:

1. Select the "Settings" command in the "Options" menu.

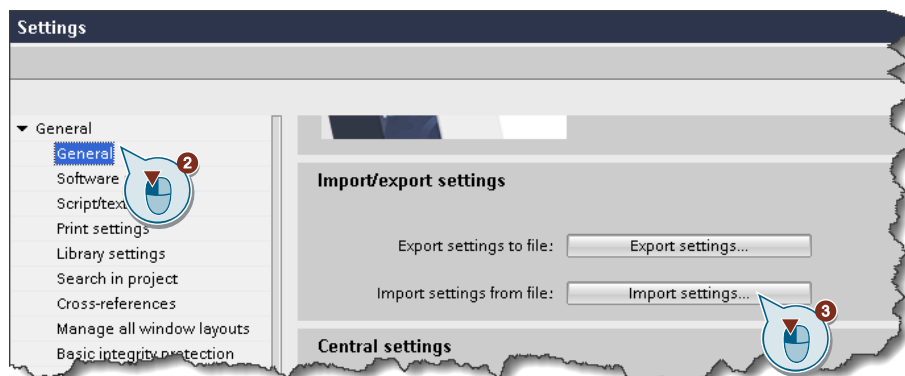

Figure 1-1

The settings of the TIA Portal are displayed.

2. Select the "General" entry in the area navigation.
3. In the "Import/export settings" area, click on the "Import settings ..." button.

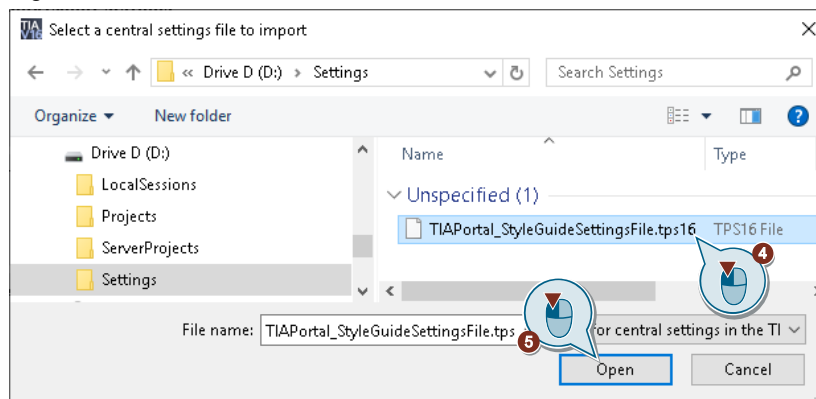

Figure 1-2

## 1 Import TIA Portal settings

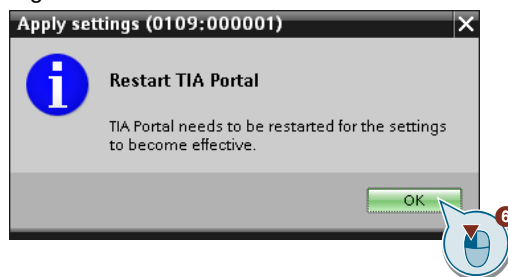

4. Select the setting file "TIAPortal\_StyleGuideSettingsFile.tps16".
5. Click "Open", to import the file.

Figure 1-3

6. In the following dialog, click "OK" and restart TIA Portal.

Figure 1-4

### Result:

The settings are applied after a restart of the TIA Portal.

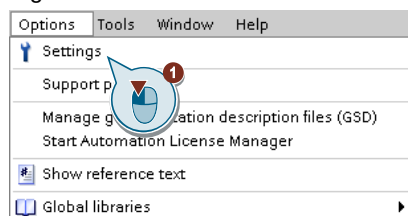

## 1.3 Alternative: Central settings

When the TIA Portal starts up, you can automatically import the settings from a initialization file, for example, to incorporate a centrally defined environment.

To apply central settings, proceed as follows:

1. Select the "Settings" command in the "Options" menu.

Figure 1-5

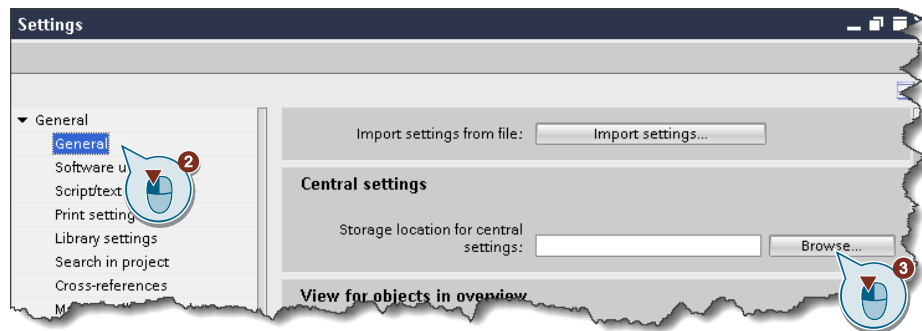

The settings of the TIA Portal are displayed.

## 1 Import TIA Portal settings

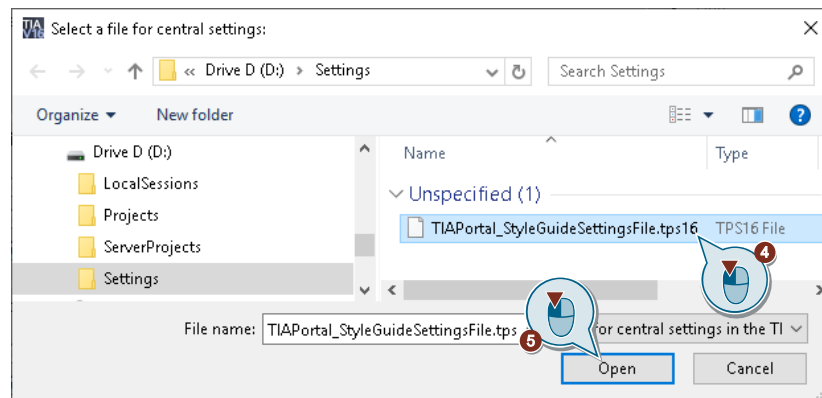

2. Select the "General" entry in the area navigation.
3. In the "Central settings" area, click on the "Browse" button.

Figure 1-6

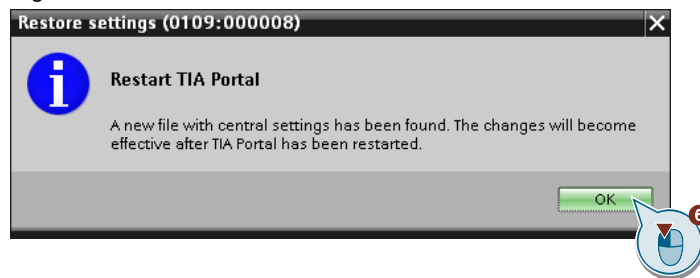

4. Select the setting file "TIAPortal\_StyleGuideSettingsFile.tps16".
5. Click "Open".

Figure 1-7

- 6.
7. In the following dialog, click "OK" and restart TIA Portal.

Figure 1-8

### Result:

The settings are applied after a restart of the TIA Portal.

### NOTE

Central settings have priority over manually imported settings and override them.
